

TFM - Master's degree final project

Study area: 5 - Master's degree final project

Character: Integratory

Type: Compulsory

ECTS credits: 15

Year: First

Semester: Second

Language of instruction: Catalan, Spanish and English

Prerequisites: To pass the defence of the TFM, the student must have passed the 45 ECTS of the other subjects.

Presentation

The study area "Master's degree final project" involves writing the Master's degree final project (TFM), which aims to enable the student to integrate the knowledge and skills acquired throughout the master's degree, as well as prove that they have the appropriate skills for their use in a professional environment. It constitutes the end point of the master's degree and is very closely linked to the rest of the subjects studied throughout the programme.

All TFMs must fulfil the regulations governing TFMs. The TFM, which is integratory in nature, consists of the preparation of an original study or project in which the knowledge and skills acquired during the master's degree are applied.

The TFM can be based on the preparation of a design proposal and project for the public sector, in at least one of the three tracks of the master's degree: education, health and inclusion; or focus on a theoretical study, the dissertation of a comprehensive analysis of a case, methodological or theoretical aspect of design for the public sector, in the three aforementioned itineraries.

The TFM may be linked to the Professional internship, provided that it is approached as a separate task and meets the objectives set out in the regulations governing the TFM.

It should be noted that the TFM must involve the development of a tangible product or result arising from the project carried out. As the culmination of the Master's degree final project, the student will give a public presentation of the results of their TFM, before a panel.

TFM - Master's degree final project

Contents: 2nd semester Compulsory ECTS: 15

- I. Timing and calendar.
- II. Tutor assignment system.
- III. Work structure and methodology: line of research, choice of topic, structure of the assignment, formal orientations.
- IV. Panel assignment system.
- V. Assessment systems: evaluation criteria and instruments and calculation of the grade.
- VI. Use of APA bibliography and citation style.
